

2020 PLANTING SEASON

PLANTING SPADES

APRIL 2020

ACE 1

Planting Spade

Code: ACE1

Good all rounder for most soil types.

KING

Planting Spade

Code: KING

The narrow blade enters the harder clay soils much easier. Good in stoney ground and opens a small hole for sand work.

LITTLE RIPPER

Planting Spade

Code: LITTLERIPPER

Designed for soft or pre-cultivated soils where cultivation is not so important.

Like us on  to enter the draw to **WIN** a Timbersaws Planting Spade of your choice delivered freight free within New Zealand. Ends 31 May 2020. Winner will be notified.

2020 PLANTING SEASON

PLANTING SPADES

APRIL 2020

POKER

Planting Spade

Code: POKER

A newly designed "All Rounder" spade with a straight shaft to give direct penetration. The high tensile blade also offers maximum penetration with its tapering sides going down to a slightly flat vee.

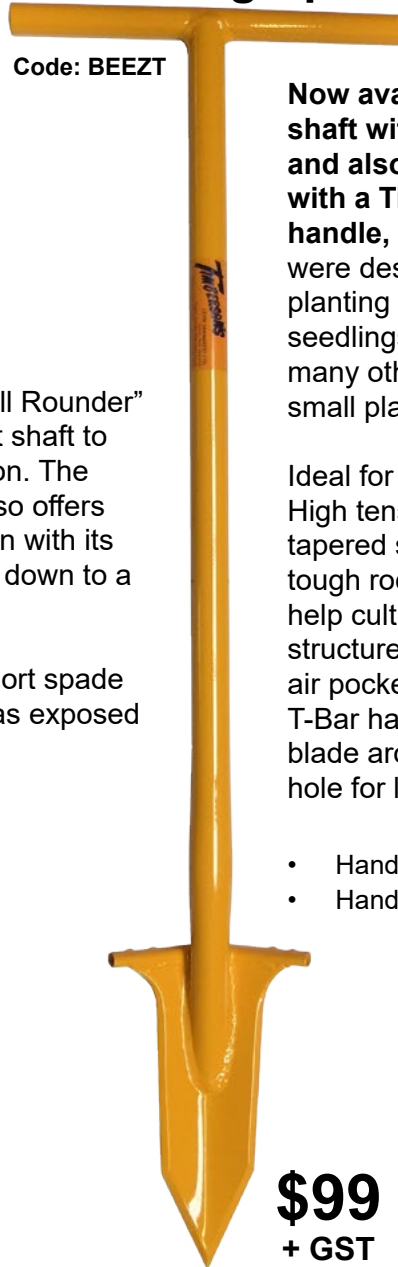

A nicely balanced short spade for hard to plant areas exposed to the elements.

\$99
+ GST

BEEZ NEEZ T-Bar

Planting Spade

Code: BEEZT

Now available with a long shaft with a T-Bar handle and also with a shorter shaft with a Timbersaws spade handle, the Beez Neez spades were designed specifically for planting MANUKA and Native seedlings. Also excellent for many other seedlings where a small planting hole is required.

Ideal for planting plugs. High tensile blade with a tapered spike to penetrate tough rock and clay soils to help cultivate below the root structure without leaving large air pockets. T-Bar handle to easily screw the blade around forming a round hole for larger pots.

- Handle width (T-Bar) 350mm
- Handle width (Handle) .. 165mm

2020 PLANTING SEASON

PLANTING SPADES

APRIL 2020

Years of design & development with forestry planting contractors has resulted in these specific spades.

The **Ace 1, Ace 1 Light and King spades** have their shafts parallel to the blades. The blades are round mouthed and double bevel ground for fast deep penetration of the ground.

The **Jack 1, 2, 3 and Little Ripper** have their shafts offset to the blades. This allows for greater cultivation of the planting hole with less body movement by the person planting.

Ace 1: Good all rounder for most soil types.

Ace 1 Light: Specially designed for soft or pre-cultivated soils

King: The narrow blade enters the harder clay soils much easier. Good in stoney ground and opens a small hole for sand work.

Poker: A good "All Rounder" spade with a straight shaft to give direct penetration. The high tensile blade also offers maximum penetration with its tapering sides going down to a slightly flat vee. A nicely balanced short spade for hard to plant areas including stoney ground.

Jack 1: Good all rounder for most soil types. Ideal for extra cultivation

Jack 2: Designed for those who need to remove soil from the planting hole.

Jack 3: Same as the Jack 2 except with elevated foot plates and it is left unpainted to prevent mud and dirt sticking to the blade.

Little Ripper: Designed for soft or pre-cultivated soils where cultivation is not so important.

TIMBERSAWS

4WD SPADE

Tough, but compact enough to tuck away in the back of your 4WD and pull it out when you need it.

Spade	Shaft Straight or Offset	Length	Blade Length	Blade width top	Blade width bottom	Blade thickness	Weight

Code: KTSPADE

Code: BEEZT

Code: BEEZH

Code: PC290

Code: PC270

Code: TS4

Code: WALSH

KT Spade:

For use in well cultivated or easy to penetrate soil. Designed with a 400mm length blade, 100mm longer than traditional spades. After extensive trials, a major forestry company now insists on the KT spade to facilitate deeper and straighter root placement for good growth and anchorage in strong winds.

Beez Neez:

Designed specifically for planting MANUKA and Native seedlings. Also excellent for many other seedlings where a small planting hole is required. Ideal for planting plugs. High tensile blade with a tapered spike to penetrate tough rock and clay soils to help cultivate below the root structure without leaving large air pockets. T-Bar handle to easily screw the blade around forming a round hole for larger pots. Also available with a shorter shaft and Timbersaws spade handle.

Bushpro:

The PC290 Hiballer and PC270 Speed are tough, lightweight, Stainless Steel Planting Spades with a Comfort D handle.

TS4/5/6/7 & Walsh: A drop forged trenching spade that has been modified and strengthened for planting trees. Good in all soil types.

SPADE HANDLES

Timbersaws spade handles have now been extensively redesigned to stand the toughest conditions.

- The inside of the D handle has been made wider for bigger hands with an oval grip for comfort.
- The spade yoke is made from nylon impregnated with rubber to assist with impact shock absorption.
- The handle grip is over moulded with a new vulcanized thermoplastic rubber for ultimate grip, comfort and durability. This special over mould substance will not break down with sweat, salt air or U.V and is non slip wet or dry. It also has the lowest rating for muscular activity with less effort needed to grip, less muscle strain and less fatigue for the user.
