

2023 PLANTING SEASON

Ultra Lite Planting Spade

Over the past 3 seasons we have been working with forestry crews to provide them with a strong lightweight planting spade with a very thin blade to penetrate the ground more easily. Blade shape, design, thickness and length is very important to allow the soil to be opened and cultivated with the least amount of effort without sacrificing the initial growth of the seedling. Shaft shape and spade length is equally important to maximise planting numbers per day and creating a very light weight spade minimises the fatigue compared to carrying a heavier spade.

- New blade shape and design
- Optimised blade length and thickness
- Easier to open and cultivate soil supporting initial seedling growth
- Spade shaft and length maximise daily quotas
- Less fatigue compared to carrying a heavier spade
- Ideally suited for less stoney/rocky ground
- Zinc coated to minimise mud/clay from sticking to blade

For those who love the "TS Spade" range, this is an ideal product to try!

Spade	Shaft Straight or Offset	Overall Length	Blade Shape	Blade Length	Blade width top	Blade width bottom	Blade thickness	Weight
Ultra Light (Gold)	Straight	905mm	Round	270mm	130mm	110mm	2mm	1.93kg

Spade Handles

We are always trying to improve our products and make them more effective and easier to use with less effort. We work with forestry crews and get feedback on what's required in the harsh forestry industry.

As an example, we found out a few years back the rubber over mould on our spade handles was failing and breaking away. We found the cause was sweat delaminating the rubber. We worked with our NZ handle manufacturer, to completely redesign the shape of the handle and grip and also the material, completely eliminating the previous issues across all our planting spade range.

The result is:

- New redesigned oval grip and handle
- New improved material
- They do not come apart
- They are more comfortable
- More ergonomic requiring less effort
- Reduced shock on the wrist, shoulder and elbow
- More trees planted

2023 PLANTING SEASON

PLANTING SPADES

APRIL 2023

Years of design & development with forestry planting contractors has resulted in these specific spades.

The **Ace 1, Ace 1 Light King and Poker spades** have their shafts parallel to the blades. The blades are round mouthed and double bevel ground for fast deep penetration of the ground.

The **Jack 1, 2, 3 and Little Ripper** have their shafts offset to the blades. This allows for greater cultivation of the planting hole with less body movement by the person planting.

Ace 1: Good all rounder for most soil types.

Ace 1 Light: Specially designed for soft or pre-cultivated soils

King: The narrow blade enters the harder clay soils much easier. Good in stoney ground and opens a small hole for sand work.

Poker: A good "All Rounder" spade with a straight shaft to give direct penetration. The high tensile blade also offers maximum penetration with its tapering sides going down to a slightly flat vee. A nicely balanced spade for hard to plant areas including stoney ground.

Jack 1: Good all rounder for most soil types. Ideal for extra cultivation

Jack 2: Designed for those who need to remove soil from the planting hole.

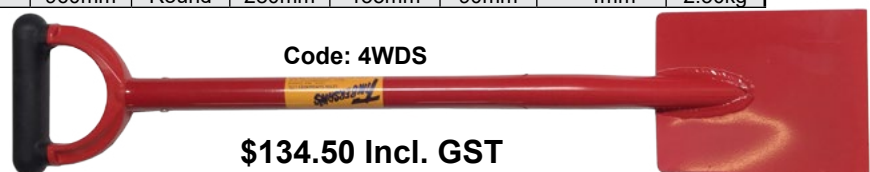

Jack 3: Same as the Jack 2 except with elevated foot plates and it is left unpainted to prevent mud and dirt sticking to the blade.

Little Ripper: Designed for soft or pre-cultivated soils where cultivation is not so important.

Spade	Shaft Straight or Offset	Overall Length	Blade Shape	Blade Length	Blade Width Top	Blade Width Bottom	Blade Thickness	Weight
Ace 1 (Black)	Straight	960mm	Round	300mm	170mm	120mm	4mm	2.90kg
Ace 1 Light (Grey)	Straight	960mm	Round	300mm	170mm	120mm	3.2mm	2.75kg
King (Red)	Straight	980mm	Round	320mm	150mm	100mm	4mm	2.85kg
Poker (Green)	Straight	960mm	Pointed	290mm	150mm	125mm	4mm	2.70kg
Jack 1 (Blue)	Offset	960mm	Round	300mm	170mm	120mm	4mm	3.10kg
Jack 2 (Blue)	Offset	960mm	Square	300mm	170mm	125mm	4mm	2.95kg
Jack 3 (Unpainted)	Offset	960mm	Square	300mm	170mm	125mm	4mm	3.30kg
Little Ripper (Wineberry)	Offset	960mm	Round	280mm	135mm	90mm	4mm	2.30kg

4WD SPADE

Tough, but compact enough to tuck away in the back of your 4WD and pull it out when you need it.

Code: PC270

Code: TS4

Code: WALSH

KT Spade:

For use in well cultivated or easy to penetrate soil. Designed with a 400mm length blade, 100mm longer than traditional spades. After extensive trials, a major forestry company now insists on the KT spade to facilitate deeper and straighter root placement for good growth and anchorage in strong winds.

Beez Neez:

Designed specifically for planting MANUKA and Native seedlings. Also excellent for many other seedlings where a small planting hole is required. Ideal for planting plugs. High tensile blade with a tapered spike to penetrate tough rock and clay soils to help cultivate below the root structure without leaving large air pockets. T-Bar handle to easily screw the blade around forming a round hole for larger pots. Also available with a shorter shaft and Timbersaws spade handle.

Bushpro:

The PC290 Hiballer and PC270 Speed are tough, lightweight, Stainless Steel Planting Spades with a Comfort D handle.

TS4/5/6/7 & Walsh: A drop forged trenching spade that has been modified and strengthened for planting trees. Good in all soil types.

SPADE HANDLES

Timbersaws spade handles have now been extensively redesigned to stand the toughest conditions.

- The inside of the D handle has been made wider for bigger hands with an oval grip for comfort.
- The spade yoke is made from nylon impregnated with rubber to assist with impact shock absorption.
- The handle grip is over moulded with a new vulcanized thermoplastic rubber for ultimate grip, comfort and durability. This special over mould substance will not break down with sweat, salt air or U.V and is non slip wet or dry. It also has the lowest rating for muscular activity with less effort needed to grip, less muscle strain and less fatigue for the user.
